

Raised Bed Gardening – a total “one stop shop” package!

More and more gardeners are realising that they can enjoy a bigger harvest with less effort by growing in raised beds. So imagine how convenient it would be if you could buy ready-made FSC timber beds, the soil to fill them, a variety of organic seed and plug plants to grow and made-to-fit crop protection kits all from the same place for the total sowing and growing package! Well that is exactly what Harrod Horticultural offer, as well as a unique design service too.

3 Great Bed Designs!

With 3 in-house designed FSC timber ranges to choose from – they vary according to thickness of wood, finishing and fixings – there is something for gardeners of all levels and budget.

Thanks to the **Allotment range** ready-made raised bed kits needn't cost a fortune. These 0.75" thick rustic unplanned boards are a sturdy, easy to assemble design with internal wooden corner fixing posts and galvanised screws. A step up from these is the **Standard Beds**. They are 1.4" thick planed boards but have the same assembly simplicity as the Allotment Beds. For those who wish to make a real feature in the garden there are the **Superior Beds**. Made with the same 1.4" thick

planed boards as the Standard Beds they have **long lasting aluminium joining brackets** and feature **chunky corner posts** for extra strength which allow the linking of multiple beds.

All 3 exclusive designs can be finished with **optional capping**, a great way to add elegance to the beds and it provides a place to rest on whilst gardening too. Each one is also **guaranteed**, with all boards high pressure treated with a non toxic preservative (after consultation with Garden Organic) to ensure they have the **best possible resistance** to fungal decay and wood boring insects.

All Shapes & Sizes!

Today's gardeners demand flexible options. So depending on the vegetable type being grown and the desired level for comfortable gardening, there is a **choice of heights** up to 32". If you have a challenging space thankfully there are **square** and **rectangular** shapes (9 sizes from 2ft x 2ft up to 6ft x 8ft) as well as a **triangle bed** to consider.

Soil Delivered To The Door!

Harrod Horticultural can take the strain of delivering soil for filling the beds too. High quality **top soils** and **improvers**, all produced to BS standard by Rolawn are available, and there is even help to calculate the volumes needed to fill the beds.

Organic Vegetable Seed & Plug Plants!

Whether gardeners wish to enjoy the rewarding aspects of growing from seed or

don't have the time, equipment and space, or need a quick fix with plug plants, there is a huge range available. All are supplied by expert growers and yes, they are all organic, certified by the **Soil Association** no less.

Total Crop Protection!

Gardeners can then protect their densely planted raised bed crops easily with the **made-to-fit** hoops or tubing/build-a-ball frames and insect-mesh cover kits. The 42" **high hoops** fit securely in galvanised steel brackets inside the bed and the cover, with its elasticated hem, slips over them and the sides of the bed. The alternative **aluminium tubing frame** simply slots together with build-a-balls and its **insect-mesh cover** attaches via tailored velcro seams.

Great Design Service!

There's help at hand for those in two minds about the layout, size, type and quantity of beds they might need. Harrod Horticultural **specialise in design** and have a unique design service which rounds off what must be the most comprehensive “one stop shop” package available to UK gardeners.

A unique design service.
