Tumbling triumph

140 litre

334 litre

635 litre

Today's modern lifestyle can be stressful and time consuming. So ideally, the time spent in the garden would produce quick results. We are all aware of the positive virtues of composting as a gardening discipline but is there time to wait 10 months for home made compost to be ready to use in the garden? Harrod Horticultural's ComposTumbler is the answer. The ComposTumbler speeds up the composting process into just 14 days in warm weather.

"The compost from my ComposTumbler is a vital ingredient in the successful growing in my organic kitchen garden. It takes the waiting out of composting and the quality of the end result is exactly the same as using the normal process. Nutrient rich compost is an essential base for any garden and my ComposTumbler has become indispensable," says Stephanie Harrod, Managing Director of Harrod Horticultural.

The secret is in the mixing, with the bacteria working faster to produce mulch that smothers annoying weeds, retains moisture and stabilises the temperature of the soil. The ComposTumbler is available in 3 sizes – 140 litre, 334 litre and 635 litre with prices from £169.95. 5 turns once a day are made easy with the geared handle on the 334 and 635 litre models and compost can be ready in 14 days in warm weather with the 334 and 635 models and 4-6 weeks for the 140 litre model.

Also available in the range is a ComposTumbler sifter (£24.95), for use with the 334 and 635 models. The sifter is a specially designed screen which fits to the opening of the ComposTumbler to unload fine crumbly compost. The sifter also works well for making your own potting compost or to achieve finer mulch for flower borders and shrubs.
