

SEER® Rockdust® is 420 million years old, freshly ground, untreated, volcanic rock blended from various Scottish quarries. Years of rigorous gardening trials and scientific analysis show SEER® Rockdust® to be safe to add to soils and compost.

Whilst chemical fertilisers may produce more immediate visual results, when you add **SEER® Rockdust®** you are adding a huge range of minerals and trace elements for long term soil health.

Thanks to the activities of the soil and compost fauna (from the microbes to the worms) the remineralised organic soil produces the following potential benefits:

CROPS

- ▶ BOOSTS organic soil fertility
- ▶ BIGGER healthier crops
- ▶ HIGHER nutritional value
- ▶ BETTER flavour
- ▶ LONGER shelf life
- ▶ INCREASES pest resistance
- ▶ LUSHER lawns
- ▶ IMPROVES drought resistance

COMPOST

- ▶ ENCOURAGES microbial activity
- ▶ INCREASES temperature
- ▶ FASTER composting
- ▶ REDUCES odour
- ▶ IMPROVES fertility
- ▶ LOCKS in nitrogen

APPLICATION OF SEER® Rockdust®

SOIL CONDITIONER

SEER® Rockdust® is most effective when applied at the end of the growing season so that the soil will be remineralised for next spring. It is, however, beneficial to apply at any time of year.

Sprinkle SEER® Rockdust® as evenly as possible over the appropriate area of ground to be planted.

Lightly rake the SEER® Rockdust® into the top 5 - 10cm of soil.

MINIMUM DOSE

0.5Kg per square metre.

A 20Kg bag covers 40 square metres. Apply every year.

MAXIMUM DOSE

5Kg per square metre.

A 20Kg bag covers 4 square metres. Apply every 5 to 10 years when fertility decreases.

SEER® Rockdust® can be used with organic soil conditioners and plant foods.

NB: Additional lime is not required.

GROW BAGS AND PLANT POTS

Mix 3mm SEER® Rockdust® into compost surface. You can choose to add your own worms where appropriate.

COMPOST ACTIVATOR

When starting, or at any stage during a composting process, sprinkle 3 - 5mm of SEER® Rockdust® onto each layer of green waste as you add it.
